

it.226.writers! today is 1/9/2023 @ 7:06PM. A moment in time I'll not forget.

I can't express my feelings nor fully comprehend the significance of the ChatGPT technology's release. I don't know what I would feel in your shoes.

The following is called a "paradigm shift." Usually, folks read about a shift but don't directly experience one in their laps. I'm talking about the American Revolution, a nuclear bomb explosion, and the release of Einstein's paper $E=mc^2$. I've stopped my day, dropped my work, and performed analysis work to share this significant moment with you.

Your reading of this is equivalent to "At 02:56 GMT on 21 July 1969, American astronaut Neil Armstrong became the first person to walk on the Moon. He stepped out of the Apollo 11 lunar module and onto the Moon's surface in an area called the 'Sea of Tranquility.'"

Realize today, ChatGPT will change all our lives, give voice to those who don't have one, and voice to those who shouldn't have one.

With confidence, I ask you to refrain from contributing to any viral sharing of your knowledge of this technology and its capabilities. As students of snhu, you have an ethical and moral code of conduct to uphold, and this is your chance to honor your adherence to it. There is much to unpack from the release of Alice from Wonderland below.

~brian

p.s. below is something beautiful

p.s.s. Further AI generative outcomes enhancement occurs by applying the techniques I'm sharing with you in class. I've been pioneering these techniques as part of my doctoral application and sharing them with you for additional case study examples.

My first press release to you, my words, brian.hogan

Without equivocation, today is a new dawn—a moment closer to the singularity, or when a computer's general intelligence is \geq a humanoid. I can't believe my luck teaching your course, whose very first week coincides with the release of technology ChatGPT. ChatGPT is a revolutionary technology. I'm being asked to design a course for the AI education platform I am part of called ICARUS-AI.

I loaded this week's reflection on Kroker's viral contagion, and below is what it generated.

You are witnessing a significant game changer and are part of it today. The last time an item of such influence was released, changing everyone's daily life, was google's search box.

The potential of ChatGPT to expedite work is mind-boggling. I also can't express to you the potential risk it plays to your future work lives.

Dig your heels in, as I will adapt the coursework to include it. ~brian

AI's version:

- <brian writes> would you please rewrite and improve the original entry
- the Assistant answers <Assistant is what it calls itself>

Certainly! Here's a revised version of the original entry:

Today marks the release of a game-changing technology called ChatGPT, which has the potential to revolutionize the way we work and communicate. This technology is truly a significant milestone on the path towards the singularity, or the point at which a computer's general intelligence surpasses that of a humanoid. As an instructor on the ICARUS-AI education platform, I am excited to be a part of this moment and to have the opportunity to teach a course that coincides with the release of ChatGPT.

However, it's important to recognize that with great power comes great responsibility. The potential of ChatGPT to streamline and accelerate work is truly mind-boggling, but it also carries risks that must be carefully considered. As we move forward, it will be crucial for those in the field of AI to stay informed about new developments and to be prepared for the potential impacts they may have on society and the workforce. I am committed to adapting my coursework to include ChatGPT and to ensuring that my students are well-equipped to navigate the complex and ever-changing landscape of AI.

=====> PART 2 <=====

NOW WATCH THIS! ChatGPT's answer to 1.write.reflect.d2 <kroker viral contagion passage>

i loaded the text of the passage to prime the pump

Question 1: <brian writes>

- given this passage can you reflect on the author's point of view of viral contagion?

Answer:

Based on the passage you provided, it seems that the author's point of view on viral contagion is one of concern and reflection. They describe the impact of the COVID-19 pandemic on their own life and community, including the control of the virus through a resilient public health system and a sense of social responsibility. The author also references the political events that occurred during the pandemic, including the rise of rightwing populism and the ongoing struggles of Indigenous communities. Overall, it appears that the author is reflecting on the complexity and interconnectedness of social and political issues in the context of viral contagion. They also express concern about the negative impacts of the pandemic, including the psychological effects on individuals and the potential for exacerbating social inequalities.

Question 2: <brian writes>

- Could you elaborate on theorists Deleuze and Guattari's suicidal death drive of facism?

Answer:

Deleuze and Guattari were French philosophers who developed the concept of the "death drive" as a fundamental aspect of human psychology. According to their theory, the death drive is an unconscious desire to return to a state of inanimate matter, and it is expressed in various forms of destructive or self-destructive behavior. They argued that this drive is closely linked to the concept of fascism, which they saw as a political movement that promotes violence and destruction as a way of achieving power. In their view, fascism appeals to the death drive by offering a sense of belonging and a sense of purpose, even if that purpose involves causing harm to others. They believed that fascism is able to gain a foothold in society when people are experiencing intense anxiety or fear, and that it is able to manipulate those emotions to gain support for its destructive agendas. Overall, Deleuze and Guattari's concept of the death drive and its relationship to fascism is a complex and controversial aspect of their philosophical thought.
